

WEEK 3 — MAP IT & GIVE IT A FACE

Portfolio Content Map, Visual Identity & Image Curation

AI Fluency Internship · Foundations · Search Ranking / ML Portfolio

1. One-Line Claim

Final claim: I build practical machine learning solutions that turn real-world problems into measurable results.

Why this was chosen: It is short, easy to remember, and focuses the portfolio on practical ML work and measurable outcomes rather than visual decoration.

2. Content Map

Page	Sections in Order	Featured Work	CTA	Proof Needed
Home	Hero → About → Skills → Featured Projects → Experience → Contact	Fischer Esterification Yield Estimator + Face Authentication	View Projects	Best project screenshots; short metrics
Projects	Project Grid → Case Studies → Results → Tech Stack → Links	Fischer Yield Estimator; DatalakeFaceAuth; Search Ranking work	View a Case Study	Screenshots, GitHub/repo links, demos, metrics
About	Introduction → Education → Skills → Experience → Certifications	ML, ECE, MATLAB, Python, React Native, AI/ML	Contact Me	Resume; final skill list; certification links
Contact	Short message → Email → GitHub → LinkedIn	—	Get in Touch	Final contact links

Primary portfolio action: Get recruiters/reviewers to open a project case study and evaluate the proof.

3. Still Need to Gather

- Clean screenshots for the Fischer Esterification Yield Estimator.
- Clean screenshots for the DatalakeFaceAuth project.
- Screenshots/results from the Search Ranking Improvement internship work.
- GitHub repository links and any live/demo links.
- Final project metrics: RMSE, R^2 , accuracy, latency, or other relevant results.
- One professional profile photo.
- Final resume and LinkedIn/GitHub URLs.
- Any testimonial, certificate, or external proof that strengthens a project.

4. Identity Kit

Fonts: Inter — use one family with different weights. Headings: 600–700; body: 400–500.

Palette:

Role	Color	Hex	Use
Main / Link	Blue	#2563EB	Links, selected states, small highlights

Text	Near-black	#111827	Headings and primary text
Background	Near-white	#F9FAFB	Main page background
Accent	Green	#10B981	Small success/result highlights only

Logo / favicon: Simple YB monogram using the same near-black and near-white palette.

Two-line style note: Clean, calm and technical, with strong whitespace and consistent typography. The interface stays quiet so real project screenshots, results and demos become the most memorable elements.

5. Image Set & Curation

Image	Source	Purpose	Decision
Profile photo	Real photo	About / contact	Use real photo
Fischer project UI/results	Real screenshot	Project proof	Use real capture
DatalakeFaceAuth UI/results	Real screenshot	Project proof	Use real capture
Search-ranking notebook/results	Real screenshot	Internship proof	Use real capture
GitHub/project architecture	Real screenshot/diagram	Technical proof	Use real capture
Hero background	Minimal / optional	Visual support	Prefer whitespace over generated art
Small decorative graphic	AI-generated if needed	Connective tissue	Keep one consistent restrained style

Rejection note: Reject flashy AI-generated hero images with fake-glass effects, excessive gradients, or generic technology imagery. They may look impressive in isolation but do not prove the quality of the actual projects. A clean title over whitespace keeps attention on real screenshots and measurable results.

6. Judgment Rules Used

- Real project evidence beats AI-generated stand-ins.
- One font family and a small palette create consistency.
- Whitespace is preferred to decorative clutter.
- The strongest project appears first.
- Every page has a clear, named CTA.
- AI is used to generate options, but selection/rejection is based on whether an option strengthens the proof.
- The portfolio design should frame the work, never upstage it.

7. Week 3 Submission Checklist

- ☐ One-line claim completed.
- ☐ Content map with pages, ordered sections, featured cases and CTAs.
- ☐ Still Need to Gather list completed.
- ☐ Identity kit completed: font, palette, hex codes, logo/favicon and style note.
- ☐ Image set planned with real project captures.

☐ AI image rejection note included.

☐ Final document uploaded to the Week 3 assignment card.

☐ Public URLs added under Deliverable Links; files/screenshots added under Files.

Prepared as the Week 3 assignment artifact
